## New Product

### CUSTOM MATERIAL MASTER® HALF FRAME BULK BAG DISCHARGER

Patented system designed for discharging product into customer's process. Unit includes Flo-Lock® discharge spout closure system which quickly halts material flow for partial bag discharge, allowing bag to be retied and removed; the Seal-Master® round bag spout access chamber with "gull wing" doors for easy operator access; the Sure-Seal™ bag spout clamping system for dust-tight material discharge; plus a carbon steel product discharge transition.

Below the transition, a bag dump station with operator access doors allows for small bags of material to enter the process mid-stream. Unit also includes a product discharge hopper equipped with fluidizing system for flow assistance.

Systems are custom designed for your specific application requirements.
