BULK BAG FILLER WITH FDA WHITE FINISH AND FOOD GRADE CONTACT SURFACES

Unit features heavy-duty tubular carbon steel frame construction for strength and durability and is adjustable for future bag size flexibility.

Unit features an FDA white paint finishing system, designed for use in Food and Beverage processing facilities. This coating may be used in immersion of fresh and saltwater and is FDA and USDA approved for areas of direct and indirect dry food contact.

Unit includes a stainless steel fill head which includes a 4" diameter outer dust control sleeve. Product contact welds continuous, ground smooth. A food grade inflatable spout seal assures a dust tight seal to bag inlet.

Systems are custom designed for your application requirements.
