## **Material Transfer & Storage Expands Customer Commitment with New Services**

*Services include operator training, equipment evaluations, service contracts and remote equipment monitoring*

**ALLEGAN, MI (Aug. 27, 2020)** – [Material Transfer & Storage](#) (MTS), an industry leader in the custom design and manufacture of bulk material filling, conditioning and discharging systems for dry powders and bulk solids, has unveiled a new service line to further enhance the customer experience.

Aimed at helping customers maintain their equipment and maximize performance, the service offerings consist of separately priced options for operator training, equipment evaluations, preventive and reactive service contracts, and remote equipment monitoring.

“Customers today are increasingly concerned about operational efficiencies and want as many precautions as possible to maximize uptime,” said MTS President Scott Nyhof. “Our new service line ensures that customers are armed with the knowledge and resources to keep their equipment up and running safely and efficiently.”

MTS offers operator training, as well as customized inspections taking place on an agreed upon schedule. Additionally, MTS has developed a preventive service contract for routine, scheduled maintenance and a reactive service contract for training, warranty parts installation, diagnostics and more. Finally, MTS’ state-of-the-art remote equipment monitoring service eliminates the need for on-site service by providing MTS with the ability to monitor equipment health, operation and faults without needing to be on-site.

## **About Material Transfer & Storage**

Headquartered in Allegan, MI, Material Transfer & Storage (MTS) is an industry leader in the custom design and manufacture of bulk bag, container and drum filling, conditioning and discharging systems for dry powders and bulk solids. For more than 30 years, MTS has been guided by the principle of building products the way they should be built: robust in design, elegant in operation, simple to use and easy to maintain. MTS designs, builds and tests each system to the customer’s unique specifications to ensure efficient start-up, easy operation and user satisfaction. MTS continues its commitment to customers by offering services including operator training, equipment evaluations, service contracts and remote equipment monitoring.
